3SL's Cradle Software Selected by Public Health England

3SL is pleased to announce that our Cradle[®] tool has been selected by Public Health England (PHE) to manage the definition and fulfilment of requirements for its Science Hub programme. This £400 million project will design and build a world class national public health science hub and headquarters in Harlow that will bring together personnel from PHE's Porton, Colindale and central London sites. The PHE Harlow site is scheduled to be fully operational in 2024.

Cradle is a requirements management, enterprise architecture and systems engineering tool that integrates the entire lifecycle of development, organisational and infrastructure projects that use agile or phase-based methods. Cradle is an ideal solution for procurement projects for ITT generation, bid assessment and contract management, by providing traceability between a managed, configuration-controlled multi-user database and all external source and published documents.

Mark Walker, Director of 3SL said: "We are delighted that PHE has chosen Cradle for this important infrastructure and reorganisation programme. We welcome the opportunity for a long-term partnership with PHE and confident that Cradle will make a significant contribution to the successful realisation of the new PHE Harlow site."

About 3SL

3SL is a UK-owned and UK-based SME that has deployed Cradle into government and industry worldwide for almost 30 years. We are a group of engineers who share a fervent desire to help others to create systems more easily, efficiently and quickly. We do this by producing the best software tools that we can, and by doing everything possible to help our customers use our tools to achieve the greatest benefit.
